

之前几期DRNI技术专题中，我们

DRNI场景是基本的部署，组成DRNI，但实际组网，每级设备都可以组成成了多级DRNI互联场景。DRNI互联可以在但江可管

在这个DRNI多级组网实例中，L2-1、L2-2是与服务器Server 1、Server 2连接的二层接入设备，其对上通过二层聚合口连接汇聚设备；DUT 1、DUT 2作为汇聚层设备配置为第一级DRNI，对上对下聚合DR聚合，实现报文的汇聚；DUT 3、DUT 4作为核心层设备配置为第二级DRNI，对下为DR聚合，并配置VRRP，虚拟IP作为服务器Server 1、Server 2的网关地址，针对上行L3设备配置等价路由；此外，DUT 3和DUT 4之间也进行路由备份配置，保证单台设备上行口down的情况下报文可以通过横穿链路实现业务不中断。最上面的L3设备作为三层设备与外网进行互联。

我们从下往上看，首先看下二层接入设备L2-1、L2-2的配置。

L2-1和L2-2是直连终端的二层接入设备，对上通过二层聚合口连接汇聚层的第一级DRNI系统，只需要在和终端互联接口上放通终端VLAN，对上配置链路聚合即可。对L2-1而言：

1. 与终端互联接口放通相应VLAN

```
vlan 10
```

```
#
```

```
interface ten-gigabitethernet 1/0/1
```

```
port link-type trunk
port trunk permit vlan 10
undo port trunk permit vlan 1

2.配置链路聚合与汇聚层DRNI系统互联
interface range ten-gigabitethernet 1/0/25 ten-gigabitethernet 1/0/27
port link-aggregation group 11
#
interface bridge-aggregation 11
port link-type trunk
port trunk permit vlan 10
undo port trunk permit vlan 1

L2-2与L2-1的配置思路是一样的，这里我们就不再重复了。

接下来是汇聚层，我们来看下第一级DRNI系统DUT 1、DUT 2应该如何配置。
DUT 1、DUT 2是第一级DRNI系统，对上对下均为DR聚合，DUT 1上的配置如下：

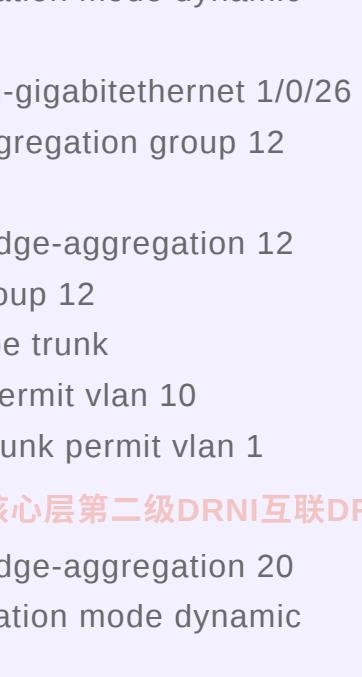

1.配置DRNI系统
drni system-mac 0001-0001-0001
drni system-number 1
drni system-priority 10000
drni role priority 10000--配置为主设备

2.配置Keepalive口
ip vpn-instance keepalive
绑定VPN实例，进一步避免其他业务流量干扰
#
interface hundredgige 1/0/53
port link-mode route
ip binding vpn-instance keepalive
ip address 1.1.1.1 255.255.255.0
#
drni keepalive ip destination 1.1.1.2 source 1.1.1.1 vpn-instance keepalive
#
drni mad exclude interface hundredgige 1/0/53

3.配置IPL链路
interface bridge-aggregation 1
link-aggregation mode dynamic
#
interface hundredgige 1/0/54
port link-aggregation group 1
#
interface bridge-aggregation 1
port drni intra-portal-port 1
port link-type trunk
port trunk permit vlan all

4.配置与二层接入设备互联DR口
```

```
interface bridge-aggregation 11
    link-aggregation mode dynamic
#
interface ten-gigabitethernet 1/0/25
    port link-aggregation group 11
#
interface bridge-aggregation 11
    port drni group 11
    port link-type trunk
    port trunk permit vlan 10
    undo port trunk permit vlan 1
#
#
```

```
interface range ten-gigabitethernet 1/0/3 ten-
    gigabitethernet 1/0/4
        port link-aggregation group 20
#
interface bridge-aggregation 20
    port drni group 20
    port link-type trunk
    port trunk permit vlan 10
    undo port trunk permit vlan 1
```

```
ip address 10.1.1.2 24
vrrp vrid 1 virtual-ip 10.1.1.1
vrrp vrid 1 priority 200
#
drni mad exclude interface Vlan-interface10

6.配置与L3互联接口
interface ten-gigabitethernet 1/0/25
port link-mode route
ip address 2.1.1.1 24

7.配置DUT 3与DUT 4之间三层路由
vlan 5
#
interface vlan-interface 5
ip address 5.1.1.1 24
#
ospf 1 router-id 2.1.1.1
import-route direct
area 0.0.0.1
network 2.1.1.0 0.0.0.255
network 5.1.1.0 0.0.0.255
#
interface vlan-interface 5
ospf 1 area 0.0.0.1
ospf cost 1000---增加cost，作为备份

DUT 4的配置思路与DUT 3一样，只是需要注意设备系统号 system-number、角色优先级 role-priority、VRRP 优先级 priority 的配置。

---

最后我们来看下L3设备的配置。

L3设备作为三层设备通过F1/0/49口与外网互联，和DUT 3、DUT 4分别建立OSPF邻居：

1.配置与DUT 3/4互联接口
interface ten-gigabitethernet 1/0/25
port link-mode route
ip address 2.1.1.2 24
#
interface ten-gigabitethernet 1/0/27
port link-mode route
ip address 2.1.2.2 24

2.配置与外网互联接口
vlan 30
#
interface fortygige 1/0/49
port link-type trunk
port trunk permit vlan 30
undo port trunk permit vlan 1

3.与DUT 3/4建立OSPF邻居，引入直连路由
ospf 1 router-id 2.1.1.2
import-route direct
area 0.0.0.1
network 2.1.1.0 0.0.0.255
```

network 2.1.2.0 0.0.0.255

				2.1.2.1	XGE1/0/27

终端之间可以实现东西向互通，终端也可以和外网实现南北互通。

以上就是DRNI多级组网的具体配置实现啦~从配置来看，DRNI多级组网中，汇聚二层转发层面的DR配置是典型的DR配置，核心层作为网关对下采用了DRNI+VRRP（详细介绍可以参考之前的DRNI+VRRP及DRNI+VLAN双活组网配置介绍），实现了设备级冗余保护和流量负载分担。核心层对上采用了单物理口对接，然后核心两台DRNI设备之间配置了三层路由，从而保证DRNI单设备在上行口down时流量可以逃生。目前级联组网已在现网中广泛应用，支持DRNI的设备基本都可以支持DRNI级联组网。

之后我们还会介绍DRNI的其他组网，问题和建议欢迎留言哦~
