问题描述

某局点查看AP日志发现 不定时出现服务模板关闭打开的现象

过程分析

查看日志发现如下日志:

%Mar 16 10:35:02:532 2020 H3C STAMGR/6/SERVICE_OFF: BSS 04d7-a5b8-c060 was deleted after service template 1 with SSID js was unbound from radio 1 on AP fatap. Reason: Disabled service template.

%Mar 16 10:35:02:537 2020 H3C STAMGR/6/STAMGR_CLIENT_OFFLINE: Client ec7d-111f-4fc1 went offline from BSS 04d7-a5b8-c070 with SSID js on AP fatap Radio ID 2. State changed to Unauth . Reason:Service template disabled.

%Mar 16 10:35:02:538 2020 H3C STAMGR/6/SERVICE_OFF: BSS 04d7-a5b8-c070 was deleted after service template 1 with SSID js was unbound from radio 2 on AP fatap. Reason: Disabled service template.

%Mar 16 10:35:02:857 2020 H3C STAMGR/6/SERVICE_ON: BSS 04d7-a5b8-c060 was created after service template 1 with SSID js was bound to radio 1 on AP fatap. %Mar 16 10:35:02:859 2020 H3C STAMGR/6/SERVICE_ON: BSS 04d7-a5b8-c070 was created after service template 1 with SSID js was bound to radio 2 on AP fatap.

服务模板在1s之内关闭重新开启，对于reason为Disabled service template，一般来说均为命令行操作导致的服务模板关闭，而查看display history-command all 未发现对应时间内有操作记录。

解决方法

与研发沟通后了解到，云ap 绿洲在下发配置的时候，会先关闭服务模板然后再开启服务模板，这个是一个正常现象，可以不用关注。
