问题描述

安装完workspace之后，准备进入部署页面时，发现页面没有响应，无法登录。

过程分析

后台执行检查脚本：./opt/vdi_check.sh

```
[root@cvknode01 opt]# ./vdi_check.sh
workspace-server install failed!
controller install successfully!
nginx install successfully!
ssv install successfully!
netdisk install successfully!
samba install successfully!
docker install successfully!
BT install successfully!
redis install successfully!
CAS&UIS install successfully!
auth-center install failed!
Unit mariadb.service could not be found.
./vdi_check.sh: line 25: [: active: unary operator expected
database install failed!
avahi install failed!
Workspace install failed!
[root@cvknode01 opt]#
```

发现很多服务都安装失败，正常环境应该是：

```
[root@workspace1 opt]# ./vdi_check.sh
workspace-server install successfully!
controller install successfully!
nginx install successfully!
ssv install successfully!
netdisk install successfully!
samba install successfully!
docker install successfully!
BT install successfully!
redis install successfully!
CAS&UIS install successfully!
auth-center install successfully!
database install successfully!
avahi install successfully!
workspace install successfully!
[root@workspace1 opt]#
[root@workspace1 opt]#
```

现场用的非auto版的镜像安装的，目前版本非auto版本的镜像安装会出错。

解决方法

目前版本非auto版本的镜像安装会出错，重新用auto版的镜像安装一下
