How does V7 AC enable AP remote Telnet login function.

Problem Description

Q: How does V7 AC enable AP remote Telnet login function?

Solution

A: First check which ap is required to log in

Versions before R5119P12 are enabled by default. Versions starting with R5119P12 need to open the following commands in the probe view:

 [AC] probe

 [AC-probe] wlan ap-execute AP name exec-control enable

AP"s default login password is h3capadmin
