

MSR和cisco设备建立L2TP隧道不成功原因分析

一、组网：

H3C系列路由器作为LAC，Cisco路由器作为LNS，之间通过Internet实现网络层互通。LNS与LAC之间通过WAN接口连接。

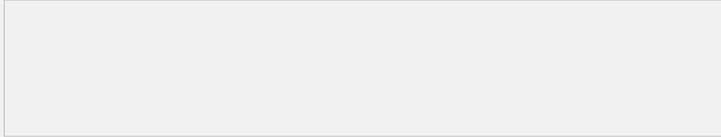

图1

二、问题描述：

正常配置完后H3C路由器（LAC）不能与Cisco路由器（LNS）之间建立隧道。

三、过程分析：

MSR路由器主要配置：

```
l2tp-group 1
undo tunnel authentication
tunnel name lac
start l2tp ip 1.1.2.2 fullusername h3c
```

Cisco侧主要配置：

```
vpdn-group 1
Default L2TP VPDN group
accept-dialin
protocol l2tp
virtual-template 1
local name lns
```

在LAC侧（MSR系列路由器）上使用debugging l2tp all命令打开调试开关，显示控制消息如下：

```
%Oct 12 21:35:35:740 2005 H3C IFNET/5/UPDOWN:Line protocol on the interface

分析原因，Cisco路由器必须配置隧道密码，默认为空，而H3C系列路由器默认隧道密码不为空。缺省情况下，Cisco路由器和H3C系列路由器都默认进行隧道验证，Cisco路由器在密码为空时自动断开隧道连接，不给对端发任何消息。

四、 解决方法：

检查LAC和LNS侧的隧道验证配置，确保两端一致，即两端都不配置隧道验证，或两端都配隧道验证且隧道验证密码相同。
