

4. 进一步分析设备侧

(1) 设备侧回应信息为空，说明是设备侧问题。

```
*Apr  4 00:35:15:284 2012 HZB7-RT-MSR3600 SNMP/7/PACKET:
Response
Request ID: 31086
Error status: 0
Error index: 0
*Apr  4 00:35:15:284 2012 HZB7-RT-MSR3600 SNMP/7/VBLIST:
sysName. 0:
*Apr  4 00:35:15:284 2012 HZB7-RT-MSR3600 SNMP/7/PACKET_DES:
Packet sent to 10.0.0.12 via UDP
```

(2) SNMP 配置看不出问题，尝试undo snmp-agent，再snmp-agent故障仍旧

(3) 申请业务窗口将个别交换机重启，发现SNMP都恢复正常，说明重启可以重置SNMP的某些信息

(4) 查看mib视图发现没有回显，可确认是mib视图，可能是手工或者网管删除了mib视图。

```
[HZB7-RT-MSR3600]display snmp-agent mib-view
[HZB7-RT-MSR3600]
```

解决方法

设备执行如下命令恢复mib视图，SNMP测试成功，纳管设备而成功，问题解决

```
[HZB7-RT-MSR3600]snmp-agent mib-view included ViewDefault iso
[HZB7-RT-MSR3600]snmp-agent mib-view included ViewDefault snmpUsmMIB
The default MIB view has been changed, and it will be restored after the system reboots.
[HZB7-RT-MSR3600]snmp-agent mib-view included ViewDefault snmpVacmMIB
The default MIB view has been changed, and it will be restored after the system reboots.
[HZB7-RT-MSR3600]snmp-agent mib-view included ViewDefault snmpModules.18
The default MIB view has been changed, and it will be restored after the system reboots.
```

另外也说明一个问题，设备侧从功能配置命令看是正常的，并不能说明设备侧就没问题。
