

知 Does ACG1000 support deploying bypass mode through aggregation ports?

Security 周天 2020-07-17 Published

Problem Description

Q: Does ACG1000 support deploying bypass mode through aggregation ports?

Solution

A: ACG1000 bypass deployment does not support aggregate interfaces, but you can choose several physical interfaces at the same time to turn on bypass mode implementation. Be aware that the two-way traffic of the network must be mirrored to ACG, otherwise the audit effect will be affected.
