

知 Does the AP support Layer 3 registration through the option 138 field?

Wireless 龚训杰 2020-08-19 Published

Problem Description

Does the AP support Layer 3 registration through the option 138 field carried by the DHCP Server?
What is the format?

Solution

AP supports three-layer registration through the option 138 field carried by the DHCP Server, and the configuration method format is the same as option 43:

```
[AC-dhcp-pool-vlan100] option 138 hex 80070000 01 C0A80A64
```

#80: Option type, fixed at 80, 1 byte.

#07: Option length, indicating the length of the following content (the number of hexadecimal numbers, here means there are 7 hexadecimal numbers behind, and 0B means there are 11 hexadecimal numbers behind), one byte. #0000: Server type, the fixed configuration is 0000 two bytes.

#01: The number of the following IP address, one byte.

C0A80A64: The hexadecimal representation of the AC's IP address 192.168.10.100.
