How to bind service templates to APs of V7 controller in batches

Problem Description

How to bind service templates to APs of V7 controller in batches

Solution

APs belong to the default-group group by default. Enter the corresponding AP model in the default default-group group and bind the service template, such as:

```
wlan ap-group default-group
ap-model WA2612
radio 1
radio enable
service-template 1
```
