Problem Description

How can I view information about APs that went offline recently on an AC?

Solution

Execute the display wlan ap connection record all command. APs that went offline most recently come first in the output. The command output is shown as follows:

<AC> display wlan ap connection record all

AP name	IP address	Serial ID	State	Time
ap71	7.7.7.41	219801A0T78156A001	Run	2016-04-05 15:27:39
