

知 How to realize the client's intelligent switching between 2.4G and 5G signals according to the usage environment?

Wireless 余煌 2020-09-27 Published

Problem Description

null

Solution

```
wlan service-template 1
ssid XXX
vlan 200
service-template enable
```

```
wlan ap ap1 model WA4320-CAN
serial-id 210235A1GUC16100XXXX
vlan 1
radio 1//5G
radio enable
service-template 1
radio 2//2.4G
radio enable
service-template 1
```

The terminal preferentially connects to the 5G signal, and switches to the 2.4G signal when there are walls between the client and the AP
