

知 How to change the access location of access device in AD campus 3.0 scheme?

AD Solution 张宇超 2020-10-19 Published

Problem Description

How to change access location of access device in AD campus 3.0 scheme?

Solution

In the AD campus 3.0 scheme, if the access device changes the access location, the original oId management information needs to be deleted, and the process of adding new access device should be followed. If the access device is directly plugged into the new port of the leaf, the access location information of the terminal accessed from this access will be inaccurate.
