### Problem Description

Hot to change Fit AP to Fat AP module?

### Solution

Execute the following commands in user view: <H3C>ap-mode fat, Use command <H3C>del /un xx.xx.bin to completely delete the Fit AP version in flash. After you delete the Fit AP version, you need to upload the Fat AP to AP. The version name must be consistent with the Fat AP version name stored in the AC flash. Attention that in Fat AP mode, the version can only be transferred manually, and cannot be delivered through the AC.
