In the automatic registration mode, when the AP does not have a version or the version does not mat ch the AC version, can I download the version or upgrade the version from the AC and register?

In the automatic registration mode, when the AP does not have a version, you cannot download the $\boldsymbol{\nu}$ ersion from the AC. You can only change it to manual registration, or manually upload the version to the AP, because the AP does not support automatic registration under Bootrom.
