

知 The number of AP's can not be shown on the CloudNet

Wireless 孟普 2021-03-10 Published

Network Topology

NULL

Problem Description

We can see the amount of AC on the CloudNet, but the amount of AP is shown as 0

Process Analysis

We can see the amount of AC on the CloudNet, indicating that AC has been managed by the CloudNet. I checked the status of AP on AC and found that they were all normal R/M status. Indicates a problem with data synchronization between AC and the CloudNet.

Solution

Oasis and AC are out of sync. By configuring NTP to synchronize the public clock, we can see the amount of AP on the CloudNet.

```
clock protocol ntp
```

```
ntp-service enable
```

```
ntp-service unicast-server time.nist.gov
```

```
clock timezone Beijing add 08:00:00
```
