

★Upgrade the firewall signature database manually

Security 周天 2021-03-18 Published

Network Topology

The latest intrusion prevention signature database file V7-IPS-1.0.109.dat is saved locally. Now you n $eed \ to \ manually \ upgrade \ the \ IPS \ signature \ database \ offline \ and \ load \ the \ latest \ IPS \ signatures.$ [Version used]

This configuration example is configured and verified on the F9360 version of F1020.

Configuration Steps

- Configure the interface IP address and security policy to ensure that the administrator can acce ss the device through the PC.
- 2. View the current signature database version.

- 3. Import IPS signature database files
 - # Choose System> Upgrade Center> Signature Upgrade.
 - # On the "Signature Upgrade" page, click the <Manual Update> button on the right side of the IPS signature database to enter the "Update IPS Signature Library" page, click the <Select> button, a nd select the local signature database file V7- IPS-1.0.109.dat.

Click the <OK> button to complete the signature database upgrade.

4. After the above configuration is completed, you can check that the current signature database v ersion has been updated on the "Signature Upgrade" page.

Key Configuration

The signature database upgrade function of each service requires a license to be used. After the lice nse expires, each service can use the existing signature database in the device to work normally, but the signature database cannot be upgraded.
