MSA2000 G1 配置全局热备

The screenshot displays the HP iNvent management interface for an MSA Storage System. On the left is a dark blue sidebar with the HP logo and 'invent' text. Below the logo are buttons for 'MONITOR' and 'MANAGE'. A 'VIRTUAL DISK CONFIG' section contains links for 'disk configuration', 'create a vdisk', 'delete a vdisk', 'about a vdisk: utility', and 'vdisk utility progress'. A 'global spare menu' section contains links for 'show global spares', 'add global spares', and 'delete global spares'. Other menu items include 'VOLUME MANAGEMENT', 'SCHEDULES', 'GENERAL CONFIG', 'EVENT NOTIFICATION', 'UTILITIES', 'RESTART SYSTEM', and 'UPDATE SOFTWARE'. At the bottom of the sidebar is a 'LOG OFF' button and user information: 'User: "manage"', 'Standard Manage User', 'Date: Sep 6 2012', and 'Time: 17:21:58'.

The main content area has a 'Help Bar' at the top with 'AUTO REFRESH ON' and 'PAGE HELP' options. Below it is a title bar 'Select Drives to Add as Global Spares'. The main content shows the message 'No drives available for spares' and a diagram of 'Enclosure 0' with a grid of drive slots. A button labeled 'Add Global Spares' is positioned below the enclosure diagram.

At the bottom of the interface is the 'MSA Storage System Panel' with an 'EVENT LOG' button. A status message reads 'Independent Cache Performance Mode Enabled'.
