## 问题描述

3PAR SMI-s的名称空间如何填写

## 解决方法

3PAR SMI-s支持的名称空间有root/PG\_interop, root/interop, root/tpd

**Table 5: CIM Server Supported Namespaces**

Namespace	Purpose
root/PG_Interop or root/interop	This CIM namespace is the Interop Namespace as defined in SMI-S. The Interop Namespace is used to find Registered Profiles and other CIM classes related to the SMI-S Server Profile. To use the root/interop namespace, use the <code>setcim</code> command to set the policy <code>no_use_pegasus_interop_namespace</code> .
root/tpd	The root/tpd namespace ( <b>Three Par Data</b> ) is used to identify CIM Servers and provides management of all classes related to managing the storage system.
