问题描述

现场更新版本由E0535H08至E0535H08L01，发现升级之后报错

```
root@H3CUI8000-IDC-CVK02:~/upgrade.e0535h08l01# ./update.sh 04-28 09:36
Fri May 21 10:30:44 CST 2021 [INFO] ===begin to update virtualization control 04-28 09:36
Fri May 21 10:30:44 CST 2021 [INFO] checking version... 04-28 09:35
Fri May 21 10:30:44 CST 2021 [INFO] checking version... Done 04-28 09:35
Fri May 21 10:30:44 CST 2021 [ERROR] Cannot get host ips from mysql database! 04-28 09:34
```

过程分析

从现场了解到，该cvk由于版本和CVM不配套，导致无法加入集群通过命令升级报错
想到cvk可单独升级，遂使用命令进行操作

```
all apply all changes respectively for all type of hosts[default]
root@H3CUI8000-IDC-CVK02:~/upgrade.e0535h08l01# ./update.sh -f cvk
getopt: invalid option -- 'f'
Apply minor changes to the virtualization control system
usage: ./update.sh [OPTIONS] [ROLE]
options:
  -h|-help    show this message
role: [all]
  help       show this message and do nothing
  cvm        apply changes for CVM hosts (master and slave)
  cvk        apply generic changes for this CVK host
  all        apply all changes respectively for all type of hosts[default]
```

报错指向-f，可见是没有该命令操作

解决方法

直接执行 `./update.sh cvk` 即可升级成功
