

知 某价值客户局点EIA升级失败

iMC 李大维 2021-07-10 发表

组网及说明

SDN 5期方案, EIA从0611P02升级至E0611P11版本

问题描述

SDN5期方案，EIA从0611P02升级至E0611P11版本时失败

过程分析

通过正常打印的deploylog及dbresult日志中可以看到如下:

./mysql: unknown variable 'symbolic-link=0'的报错

查看mysql进程正常

```
root 28317 22287 0 16:00 pts/0 00:00:00 sudo ./mysqld --user=root --basedir=/usr/local/mysql --datadir=/usr/local/mysql/data
--pid-file=/usr/local/mysql/mysql.pid --log-error=/usr/local/mysql/log/error.log --port=3307
root 28318 28317 0 16:00 pts/0 00:00:00 ./mysqld --user=root --basedir=/usr/local/mysql --datadir=/usr/local/mysql/data --pi
d-file=/usr/local/mysql/mysql.pid --log-error=/usr/local/mysql/log/error.log --port=3307
steve 28511 28349 0 16:00 pts/2 00:00:00 grep --color=auto mysql
```

1、查看mysql的配置文件, /etc/my.cnf中

```
# Disabling symbolic-links is recommended to prevent assorted security risks
symbolic-links=0
# Settings user and group are ignored when systemd is used.
# If you need to run mysqld under a different user or group,
# customize your systemd unit file for mariadb according to the
# instructions in http://fedoraproject.org/wiki/Systemd
```

发现由于单句过长配置文件分成了两行

2、将此行注释掉即可

解决方法

重新升级EIA正常
