组网及说明

略

问题描述

现场版本是0703P08,使用dbman恢复之后有部分db文件无法恢复

过程分析

查看dbman对应日志

2021-07-14 21:08:17 [DEBUG] [CdbRestore::ExecRestoreSql] Exec sql log: Msg 1827, Level 16, State 4, Server WIN-D6J76HP87N9, Line 1 CREATE DATABASE or ALTER DATABASE failed because the resulting cumulative database size would exceed your licensed limit of 10240 MB per database. Msg 3013, Level 16, State 1, Server WIN-D6J76HP87N9, Line 1 RESTORE DATABASE is terminating abnormally.

2021-07-14 21:08:17 [DEBUG] [Remove] Remove file: C:\Program Files\iMC\dbman\bin\dbop.sql.log

2021-07-14 21:08:17 [DEBUG] [Remove] Remove file: C:\Program Files\iMC\dbman\bin\dbop.sql

2021-07-14 21:08:17 [ERROR] [CdbRestore::RestoreOneLocalDBase] Fail to restore `C:\Users\Administrator\Desktop\imc0703eia0611p09\imc0703eia0611p09\127.0.0.1@ead_ead_db_20210714_194454_full.db".

2021-07-14 21:08:17 [ERROR] [CdbRestore::RestoreDatabaseList] Fail to restore DB file in Restore OneDBase Function 127.0.0.1@ead_ead_db_20210714_194454_full.db

可以查看到如下报错

CREATE DATABASE or ALTER DATABASE failed because the resulting cumulative database size would exceed your licensed limit of 10240 MB per database. Msg 3013, Level 16, State 1, Server WIN-D6J76HP87N9, Line 1 RESTORE DATABASE is terminating abnormally

怀疑为现场恢复的iMC环境为内嵌数据库

解决方法

经确认，确为内嵌数据库，致使db恢复文件大于10G导致无法恢复成功，建议现场将恢复的IMC重装为外置数据库即可
