组网及说明

CAS E0306H11

## 问题描述

CAS E0306H11升级到E0535时，执行预检查时，有如下报错。提示failed to get local mysql password。

```
root@csstsg-cvkn01:~/upgrade.e0535#  
root@csstsg-cvkn01:~/upgrade.e0535# ./upgrade.sh  
upgrade.sh      upgrade.sh.x  
root@csstsg-cvkn01:~/upgrade.e0535# ./upgrade.sh precheck  
[INFO] This host is CVM or CVK? [CVM/CVK]: cvm  
[INFO] Pre-check the status of CAS environment...  
ssh_exchange_identification: Connection closed by remote host  
Failed to get mysql password for localhost  
[ERROR] Failed to get local mysql password  
root@csstsg-cvkn01:~/upgrade.e0535#
```

## 过程分析

- 1) 确认是否有修改过mysql的数据库密码。//如果有修改过，需要将密码修改为默认密码
- 2) 现场是否有做过安全加固，禁止ip等相关操作。因报错中有ssh\_exchange\_identification:connection closed by remote host
- 3) 执行ssh localhost命令时，无法执行，应该是localhost地址被禁用了。查看/etc/host.deny发现有相应的配置。查看/etc/hosts.allow中也有相关的配置。

```
sshd:192.168.200.115:allow  
sshd:192.168.200.149:allow  
sshd:192.168.200.148:allow  
sshd:192.168.200.174:allow  
sshd:192.168.200.230:allow  
sshd:192.168.200.126:allow  
sshd:192.168.11.60:allow  
sshd:192.168.4.*:allow  
sshd:192.168.10.3:allow
```

#### 解决方法

现场因为做了安全加固导致，在hosts.allow配置文件中新增 sshd:127.0.0.1:allow即可。重新执行升级预检查。
