问题描述

CloudOS如何查看grafana组件版本

解决方法

- 1、pod | grep grafana
- 2、kubectl exec -itn <命名空间> xxxx bash
- 3、cat /usr/share/grafana/VERSION; 或执行grafana-server, 第一行会打印version信息

示例:

```
[root@osnode3 ~]# pod | grep grafana
cloudos-mesh          grafana-7b9787b96d-d84zn          1/1      Running    0          28d      10.242.0.30   osnode3   <none>
prometheus-monitoring grafana-65fc88d44-9phwm           1/1      Running    0          4d       10.242.0.77   osnode3   <none>
[root@osnode3 ~]# kubectl exec -itn cloudos-mesh grafana-7b9787b96d-d84zn bash
grafana@grafana-7b9787b96d-d84zn:/usr/share/grafana$ cat /usr/share/grafana/VERSION
6.1.6grafana@grafana-7b9787b96d-d84zn:/usr/share/grafana$ cat /usr/share/grafana/VERSION
6.1.6grafana@grafana-7b9787b96d-d84zn:/usr/share/grafana$ grafana-server
grafana@grafana-7b9787b96d-d84zn:/usr/share/grafana$ grafana-server
INFO[01-18|10:03:52] Starting Grafana              logger=server version=6.1.6 commit=cf9cb45 branch=HEAD compiled=2019-04-29T13:29:28+0000
