问题描述

参考官网1.18.4 SSH用户的LDAP认证配置

https://www.h3c.com/cn/d_202205/1615010_30005_0.htm#_Toc104452543

配置后登录权限不够

```
<DC_jieru>
<DC_jieru>
<DC_jieru>dis cu
Permission denied.
<DC_jieru>sy
System View: return to User View with Ctrl+Z.
[DC_jieru]
[DC_jieru]
[DC_jieru]
[DC_jieru]
[DC_jieru]
[DC_jieru]?
System view commands:
  access-list  Alias for 'acl'
  end          Alias for 'return'
  erase        Alias for 'delete'
  exit         Alias for 'quit'
  hostname     Alias for 'sysname'
  logging      Alias for 'info-center'
  mtrace       Configure the multicast traceroute
  no           Alias for 'undo'
  ping         Ping function
  quit         Exit from current command view
  return       Exit to User View
  show         Alias for 'display'
  tracert      Tracert function
  write        Alias for 'save'

[DC_jieru]
[DC_jieru]
```

过程分析

修改为network-admin后还是不可以

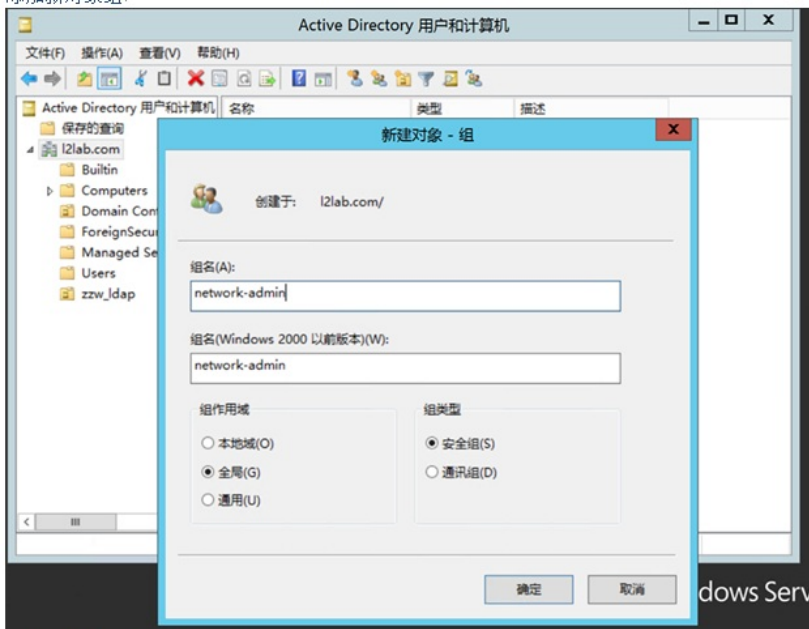

```
line vty 0 63
```

```
authentication-mode scheme
```

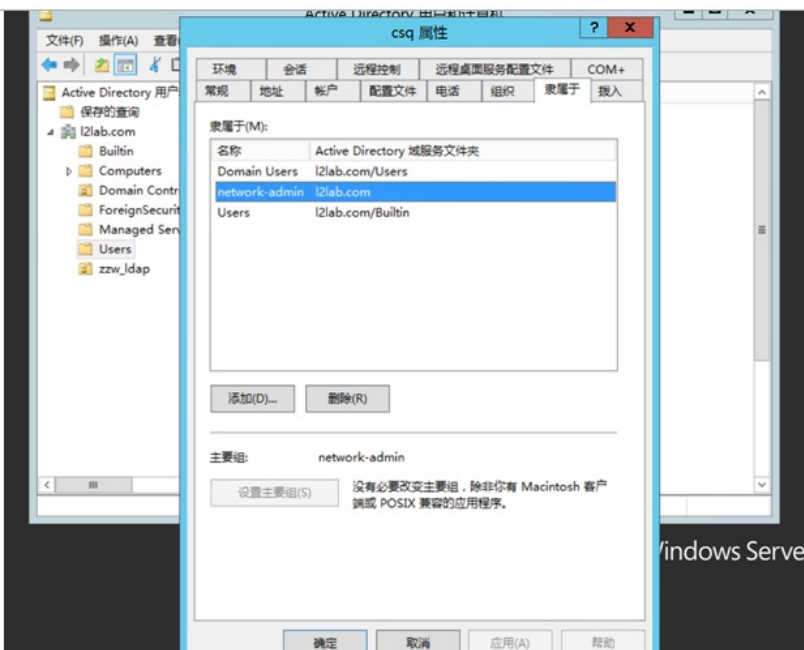

```
user-role network-operator
```

正常来说是需要配置LDAP属性映射来ying"suser-role的network-admin权限实现的

添加新对象组

用户添加后，设置主要组应用。

对应LDAP服务器的配置，设备需要配置

```
ldap attribute-map test
```

```
map ldap-attribute memberof prefix cn= delimiter , aaa-attribute user-role
```

但是这个user-role实际是配置不上的，只能配置以下两个参数，并且测试创建user-group组后，也无法去调用user-role

```
[DC_jieru-ldap-attr-map-test]map ldap-attribute memberof prefix cn= delimiter ,
解决方式?
user-group User group attribute
user-profile user-profile-attribute
[DC_jieru-ldap-attr-map-test]map ldap-attribute memberof prefix cn= delimiter ,
aaa-attribute user-role
% Unrecognized command found at '^' position.
```

配置user-gourp是没有作用的，attribute map 这个参数后面还是 not configured。
[H3C-isp-aaa]authorization login ?

```
ldap-attribute-map Specify HWTACACS scheme
map ldap-attribute memberof prefix cn= delimiter , aaa-attribute user-group
local Specify local scheme
return
[DC_jieru-ldap-attr-map-test]dis ldap scheme
Total 1 LDAP schemes
radius-scheme Specify RADIUS scheme
-----
LDAP scheme name      : sdh
authentication server : sdh
IP                    : 10.2.90.1
Port                  : 389
VPN instance          : Not configured
LDAP protocol version: Not configured
Server timeout interval : 10 seconds
Login account DN      : cn=syncadmin,ou=users,ou=sdh,dc=sdh,dc=cn
Base DN                : ou=sdh,dc=sdh,dc=cn
Search scope          : all-level
User searching parameters:
  User object class   : Not configured
  Username attribute  : samaccountname
  Username format     : without-domain
  Authorization server : Not configured
  Attribute map       : Not configured
-----
```

配置LDAP protocol version network-ipv3 in simple XXX, 然后完成ldap认证后，登录设备然后再做用户角色 Login account DN admin 权限
