

V7版本如何查看BGP路由携带的团体属性?

答:

如果是普通BGP路由: display bgp routing-table ipv4 x.x.x.x

如果是MP-BGP路由: display bgp routing-table vpnv4 x.x.x.x

BGP routing table information of x.x.x.x/22:

```
From          : x.x.x.x
Rely nexthop  : x.x.x.x
Original nexthop: x.x.x.x
OutLabel      : NULL
AS-path       : xxxxx xxxxx
Origin        : igp
Attribute value : localpref 100, pref-val 0
State         : valid, internal, best
IP precedence : N/A
QoS local ID  : N/A
Traffic index : N/A
```

```
From          : x.x.x.x (x.x.x.x)
Rely nexthop  : x.x.x.x
Original nexthop: x.x.x.x
OutLabel      : NULL
Community     : <xxxxx:xxx>
Ext-Community : <RT: xxxxx:xxx> //如果MP-BGP则只会显示拓展团体属性
AS-path       : xxxxx xxxxx
Origin        : igp
Attribute value : localpref 11, pref-val 0
State         : valid, external
IP precedence : N/A
QoS local ID  : N/A
Traffic index : N/A
```
