问题描述

配置ipv6地址报错，如下：

```
[QD-DIP-QDGD-P-01-Ten-GigabitEthernet3/1/1] ipv6 address FEC0::10:1:2:14 126
```

Invalid address! Address entered is a subnet router anycast address.

```
[QD-DIP-QDGD-P-01-Ten-GigabitEthernet3/1/1] ipv6 address FEC0::10:1:2:14 124
```

## 解决方法

[SR88-UP-GigabitEthernet2/0/17]ipv6 address FEC0::10:1:2:14 126  
Invalid address! Address entered is a subnet router anycast address.  
128-126=2

此时单播地址后两位全零，设备会认为该地址是任播地址，无法配置。
