

## 知 升级后UC2.0后，用远程工具登录后台时kubectl命令无法执行

U-Center 2.0 贾海韵 2023-01-03 发表

### 问题描述

升级后UC2.0后，用远程工具登录后台时kubectl命令无法执行

```
[root@hq-f16-adcamp-3 ~]#
[root@hq-f16-adcamp-3 ~]#
[root@hq-f16-adcamp-3 ~]# kubectl -n service-software get pod -o wide| grep wsm
bash: kubectl: command not found
[root@hq-f16-adcamp-3 ~]# kubectl -n service-software get pod -o wide| grep wsm
The connection to the server localhost:8080 was refused - did you specify the right host or port?
[root@hq-f16-adcamp-3 ~]# kubectl -n service-software get pod
The connection to the server localhost:8080 was refused - did you specify the right host or port?
[root@hq-f16-adcamp-3 ~]# kubectl get pod -A
The connection to the server localhost:8080 was refused - did you specify the right host or port?
[root@hq-f16-adcamp-3 ~]# kubectl get node
The connection to the server localhost:8080 was refused - did you specify the right host or port?
[root@hq-f16-adcamp-3 ~]# kubectl get nodes
The connection to the server localhost:8080 was refused - did you specify the right host or port?
[root@hq-f16-adcamp-3 ~]# kubectl get pos
The connection to the server localhost:8080 was refused - did you specify the right host or port?
[root@hq-f16-adcamp-3 ~]# kubectl get pod
The connection to the server localhost:8080 was refused - did you specify the right host or port?
[root@hq-f16-adcamp-3 ~]#
```

#### 解决方法

这种情况一般是因为远程工具中SSH一直连着后台没断开过，升级后环境变量没刷新。执行`source /etc/profile`，生效一下环境变量即可。
