## 组网及说明

文档《HPE\_a00006411en\_us\_HPE 3PAR Service Processor Software 5.x Rebuild Instr...》仅包含使用iLO Virtual Disk挂载方式进行升级,由于当前物理SP型号为DL120Gen9(早期SP版本),升级版本过程中发现一部分.deb包安装失败,而后无法登录,采用U盘方式相比iLO Virtual Disk挂载传输更稳定且更快速。

## 配置步骤

升级过程中某几个包丢失,无法远程通过IP:8443登录

参照《HPE\_a00006411en\_us\_HPE 3PAR Service Processor Software 5.x Rebuild Instr...》 个人电脑IP设置为10.255.155.49/255.255.255.248

直连iLO口, 使用10.255.155.52登录iLO

进入Java Web Start建议使用U盘重灌, iLO Virtual Media容易受网速影响。

直接使用Physical SP包制作启动U盘, iLO>Power选择reset

(启动U盘制作参考https://m.baidu.com/sf?

自检界面选择F11进入Boot Menu,选择One-Time Boot Menu后,选择2)从USB Device启动

## 此处选择3,系统将自动安装
