After adding a managed HPE ProLiant DL-Series Server to HPE OneView, the server will not appear to be licensed in the OneView list. This can happen because the While the HPE Integrated Lights-Out (ILO) has an embedded license, OneView has the following requirements for the license to be added to the entitlement list:

The server must be "Managed"
The IP address for the iLO must be valid

The by address for the LO must be valid
 The hostname of LO must conform to RFC 952 standard, where the hostname only can contain "a-z A-Z 0-9.: -" characters

The license entitlement will silently fail if any of the requirements above are not met even though the server was successfully added to OneView.
