

问题描述

如何在前台页面修改portal页面定制文字内容？举例如何将如下页面定制内容中的【密码】修改为【验证码】？

解决方法

点击绘制登录页面，按F12打开开发者模式，找到placeholder字段（密码），将密码修改为验证码即可

The screenshot displays the HBC Intelligent Management Center interface. On the left, a sidebar lists various management options. The main area shows a login page with a 'Logo' and a '密码' (Password) field. A red box labeled '4' highlights the password input field. To the right, the developer tools are open, showing the 'Elements' panel. A red box labeled '5' highlights the HTML element for the password field, which has a 'placeholder' attribute. A red box labeled '6' highlights the 'placeholder' attribute in the HTML code. A red box labeled '3' highlights the 'Elements' panel header. A red box labeled '2' highlights the 'F12' key icon in the browser's address bar. A red box labeled '1' highlights the 'Inspect' button in the developer tools. The console shows several 'Uncaught TypeError' messages.
