

知 安装EPS扫描器时提示“unsupported kernel version”

iMC EPS yyh123 2023-12-27 发表

问题描述

在安装EPS扫描器时在选择是否安装“psvscan”选择y后出现“unsupported kernel version”报错：

```
[root@localhost EScan]# sh install.sh
installing...
Starting EScan: OK
main::EScan Path: /root/EScan
Installation for EScan is done.
Do you want to install psvscan as well on this machine? [y/n]:y

This script will install psvscan which consists of two components: pscancatcher and pscanparser.
You could install both of them on one machine or install each of them respectively on different machines.

Do you want to install pscancatcher on this machine? [y/n]:y
Do you want to install pscanparser on this machine? [y/n]:y
install_psvscan.sh: !!ERROR->unsupported kernel version: 5.10.38-21.01.el7.x86_64.
Failed to install kernel module from pscancatcher; quit this installation.
```

解决方法

“Do you want to install psvscan as well on this machine”该提示为是否安装被动扫描器，

(1) 选择n为不安装被动扫描器，后续eps扫描器即可正常安装；

(2) 选择y为继续安装被动扫描器，需将Linux扫描器EPSScanner_Linux.tar拷贝到/user/local目录下并解压，进入/usr/local/EScan/pscan，执行安装命令：sh install_psvscan.sh
