### 问题描述

Oracle的Wnnn进程有何作用

### 解决方法

Wnnn进程是： Space Management Worker Processes (Wnnn) populate or repopulate data on behalf of IMCO.

During population, Wnnn processes are responsible for creating IMCUs, SMUs, and IMEUs. When creating IMEUs, the worker processes perform the following tasks:

- Identify virtual columns for population
- Create virtual column values
- Compute values for each row, transform the data into columnar format, and compress it
- Register the objects with the space layer
- Associate the IMEUs with their corresponding IMCUs
