问题描述

Oracle in_memory 如何启用

解决方法

将inmemory_size 设置为非0，即可启动IN_Memory。

参考如下：

Enable the IM column store size by setting the INMEMORY_SIZE initialization parameter.

By default, INMEMORY_SIZE is set to 0, which means the IM column store is disabled. To enable the IM column store, set the initialization parameter INMEMORY_SIZE to a value greater than zero before restarting the database instance. You can dynamically increase the INMEMORY_SIZE size setting by using an ALTER SYSTEM statement.
