### 问题描述

Oracle IM关闭方法

### 解决方法

You can disable the IM column store by setting the INMEMORY\_SIZE initialization parameter to zero, and then reopening the database.

### Assumptions

This task assumes that the IM column store is enabled in an open database.

To disable the IM column store:

1. Set the INMEMORY\_SIZE initialization parameter to 0 in the server parameter file (SPFILE).
2. Shut down the database.
3. Start a database instance, and then open the database.
