问题描述

Oracle IM关闭方法

解决方法

You can disable the IM column store by setting the INMEMORY_SIZE initialization parameter to zero, and then reopening the database.

Assumptions

This task assumes that the IM column store is enabled in an open database.

To disable the IM column store:

1. Set the INMEMORY_SIZE initialization parameter to 0 in the server parameter file (SPFILE).
2. Shut down the database.
3. Start a database instance, and then open the database.
