

问题描述

由于之前存储异常时cloudos管理界面去扩容了共享导致manila去扩容共享失败，待存储恢复后再次去扩容该共享，但是仍然报扩展失败

解决方法

需要先reset该share的状态后再进行扩容的操作：

pod | grep mm找到manila容器

kubectll -n cloudos-iaas exec -it pod名字 bash进入manila共享节点的容器

执行source /root/admin-openrc.sh ,

manila share-instance-list查看实例的详细信息：

manila reset-state --state available <Share ID>

```
[root@hy-cloudos-13-14u15u-01 ~]#
[root@hy-cloudos-13-14u15u-01 ~]# source /root/admin-openrc.sh
-bash: /root/admin-openrc.sh: No such file or directory
[root@hy-cloudos-13-14u15u-01 ~]# pod | grep mm
cloudos-iaas      naspoolrc-mm-cfzpp
cloudos-iaas      default
cloudos-iaas      os-wechat-dsxxm
cloudos-iaas      osxmnaspoolrc-mm-b5hmk
[root@hy-cloudos-13-14u15u-01 ~]# kubectl -n cloudos-iaas exec -it naspoolrc-mm-cfzpp bash
[root@naspoolrc ~]# source /root/admin-openrc.sh
[root@naspoolrc ~]# manila share-instance-list
+-----+-----+-----+-----+-----+-----+
| ID | Server ID | Share Type ID | Share ID | Host | Status | Availability Zone | Share Network ID |
+-----+-----+-----+-----+-----+-----+
| 01ead204-d5ab-4e18-b828-b01297408578 | 44f127b5-54c5-4712-93c2-9c8cc5bc1c58 |  | 44f127b5-54c5-4712-93c2-9c8cc5bc1c58 | naspoolrc@HC_A2E6#Pool0 | extending_error | nova | None |
| b935a2f2-c259-4637-b0bb-7a1c5a091749 |  |  |  | naspoolrc@HC_A2E6#Pool0 | available | nova | None |
| 183b7ff4-101a-4991-8e57-f11da206d549 |  |  |  | naspoolrc@HC_A2E6#Pool0 | available | nova | None |
+-----+-----+-----+-----+-----+-----+
[root@naspoolrc ~]# manila reset-state --state available 44f127b5-54c5-4712-93c2-9c8cc5bc1c58
[root@naspoolrc ~]#
```

随后即可正常扩容为8000G：
