

知 [MVS]greatsql 修改service_uuid

性能分析和调优

问题描述

数据库版本:greatsql 8.0.32-25

如数据库为直接复制而来, 则默认server_uuid相同, 需手动修改。

如不修改, 则启动group_replication失败, 提示如下错误:

```
2024-05-22T06:37:59.268585Z 0 [ERROR] [MY-011516] [Repl] Plugin
group_replication reported: 'There is already a member with server_uuid 4396d029-1
7e9-11ef-b634-005056abc0a1. The member will now exit the group.'
```

解决方法

修改方法:

查看datadir路径

```
mysql> show variables like 'datadir'\G
***** 1. row *****
Variable_name: datadir
Value: /data/greatsqldb/
1 row in set (0.01 sec)
```

查看当前库server_uuid

```
mysql> select uuid()\G
***** 1. row *****
uuid(): a305ef05-1806-11ef-b017-005056ab76d4
1 row in set (0.00 sec)
```

修改为查询到的uuid

```
vi /data/greatsqldb/auto.cnf
```

重启数据库

```
systemctl restart greatsql.service
```
