

问题描述

ADDC检查网络节点链路老化状态

过程分析

通过API, VSM模块

查找GET/networknodes/agedlink

/networknodes Show/Hide List Operations Expand Operations Raw

- GET /networknodes Gets network node list
- POST /networknodes Adds network nodes
- PUT /networknodes/{networknodeid} Modifies a network node
- DELETE /networknodes/{networknodeid} Deletes a network node
- GET /networknodes/agedlink** checkNetworkNodeLinkState

Implementation notes

Normal response codes: OK (200)

Error response codes: Unauthorized(401), Forbidden(403), NotFound(404), InternalServerError(500)

Parameters

Parameter	Value	Description
aging_time	<input type="text" value="1440"/>	(Optional.) Filters result by agingTime(unit:minute).

Try it out! [Hide Response](#)

Request URL

```
http://192.168.215.40:30000/vds/1.0/networknodes/agedlink?aging_time=1440
```

Response Body

```
{  "links": []}
```

Response Code

```
200
```

解决方法

输入1440查看是否有超过24H且未被老化删除,则需要人工确认

API进入方法:

统一数字底盘SeerEngine-DC API界面访问方式:

SeerEngine-DC E6205之前版本: <http://x.x.x.x:/30000/api>

SeerEngine-DC E6205及之后版本: <http://x.x.x.x:30000/dc/rsdoc/api/index.html>
