

# 【MVS】openEuler 中执行yum命令报错SSL certificate problem: unable to get local issuer certificate

性能分析和调优 吴成井 2024-10-28 发表

## 问题描述

### 系统版本:

```
openEuler 24.03 (LTS)
6.6.0-28.0.0.34.oe2403.x86_64
```

### 问题概述:

执行 yum makecache提示如下错误，检查网页路径无问题；

```
# yum makecache
OS
 0.0 B/s | 0 B  00:00
Errors during downloading metadata for repository 'OS':
 - Curl error (60): SSL peer certificate or SSH remote key was not OK for https://mirrors.XXX.com/opensuse/openSUSE-24.03-LTS/OS/x86_64/repoata/repomd.xml [SSL certificate problem: unable to get local issuer certificate]
Error: Failed to download metadata for repo 'OS': Cannot download repomd.xml:
Cannot download repoata/repomd.xml: All mirrors were tried
```

## 解决方法

### 解决办法:

关闭 SSL Verification (生产环境不建议修改) :

```
# vim /etc/yum.conf
添加 sslverify=false
```

### 修改后测试:

重新执行yum makecache正常。

```
# yum makecache
OS
