

```

ITOA安装过程中在check kafka过程中, 报超时 2018-02-08 16:48:06,825 p=6935 u=root | TASK [check the kafka] ***** 2018-02-08 16:48:06,858 p=6935 u=root | skipping: [10.0.1.41] 2018-02-08 16:53:07,803 p=6935 u=root | fatal: [10.0.1.42]: FAILED! => {"changed": false, "elapsed": 300, "failed": true, "msg": "Timeout when waiting for 10.0.1.42:6667"} 2018-02-08 16:53:07,817 p=6935 u=root | fatal: [10.0.1.43]: FAILED! => {"changed": false, "elapsed": 300, "failed": true, "msg": "Timeout when waiting for 10.0.1.43:6667"} 最终安装失败
2018-02-08 16:48:06,825 p=6935 u=root | TASK [check the kafka] *****
***** 2018-02-08 16:48:06,858 p=6935 u=root | skipping: [10.0.1.41] 2018-02-08
16:53:07,803 p=6935 u=root | fatal: [10.0.1.42]: FAILED! => {"changed": false, "elapsed": 300, "failed": true, "msg": "Timeout when waiting for 10.0.1.42:6667"} 2018-02-08 16:53:07,817 p=6935 u=root | fatal: [10.0.1.43]: FAILED! => {"changed": false, "elapsed": 300, "failed": true, "msg": "Timeout when waiting for 10.0.1.43:6667"}

```

通过查看kafka日志, 发现报错信息为kafka的log.dirs下有ITOA文件夹 (es生成的), kafka要求为空目录, 查看安装配置文件kafka.list:

```

kafka.prepare=no
kafka.number=2
kafka.data.path=/opt/disk01
es.data.path=/opt/disk01,/opt/disk02,/opt/disk03
问题根源确定。

```

修改配置文件为:

```

kafka.prepare=no
kafka.number=2
kafka.data.path=/opt/disk01/kafka,/opt/disk02/kafka,/opt/disk03/kafka
es.data.path=/opt/disk01/es,/opt/disk02/es,/opt/disk03/es
重新部署, 成功

```
