问题描述

Comware V5防火墙异常重启故障如何收集堆栈信息?

解决方法

首先收集设备诊断信息，然后在系统视图下进行如下操作收集堆栈信息。

```
[H3C]_hidecmd
```

Now you enter a hidden command view for developer's testing, some commands may affect operation by wrong use, please carefully use it with our engineer's direction.

```
[H3C-hidecmd]display exception 10 verbose
```

```
[H3C-hidecmd]display exception 10 verbose from-device
```

```
[H3C-hidecmd]display error-information 50 verbose
```

```
[H3C-hidecmd]display error-information 50 verbose from-device 查看保存的10次堆栈信息。
```
