

组网及说明

无

配置步骤

```
#
role name 123
rule 1 permit command tftp * get *           //从tftp服务器上下载文件
rule 2 permit command tftp * put *          //从设备上往tftp服务器上上传文件
#
local-user 123 class manage
password simple 123
service-type telnet ssh
authorization-attribute user-role 123
#
```

测试效果

```
login: 123
Password:
<H3C>?
User view commands:
  quit      Exit from current command view
  system-view  Enter the System view
  tftp      Open a TFTP connection
<H3C>sys
System View: return to User view with Ctrl+Z.
[H3C]?
System view commands:
  quit      Exit from current command view
  return    Exit to user view
[H3C]
<H3C>tftp ?
  STRING<1-253> IP address or hostname of the TFTP Server
  ipv6        IPv6 TFTP Client
<H3C>tftp 10.88.14.189 ?
  get        Download a file from the TFTP server
  put        Upload a local file to the TFTP server
  sget       Download a file from the TFTP server securely
<H3C>tftp 10.88.14.189 put 1.txt
Press CTRL+C to abort.
% Total    % Received % Xferd  Average Speed   Time    Time     Time  Current
           Dload  Upload  Total   Spent    Left   Speed

<H3C>■
```

配置关键点

- 1、undo authorization-attribute user-role network-operator
- 2、command命令中用*匹配任意
