```

### 解决方法

检查存储和主机之间的连接，发现现场为集群切换存储后，漏配了cluster节点的该条存储。  
重新配置后，删除rc，重建rc，由rc自动拉起容器。

```
/opt/bin/kubectl --server 127.0.0.1:8888 delete rc postgresqlrc
/opt/bin/kubectl --server 127.0.0.1:8888 create -f /opt/bin/confFile-cluster/postgresql-rc.yaml
```
