

知 在V7防火墙域间策略中应用ACL时如何统计匹配报文的数目

域间策略/安全域 朱尘扬 2016-04-08 发表

问题：V7防火墙的域间策略策略中调用的是ACL时如何统计域间策略匹配的报文数目

配置：1、域间策略

```
zone-pair security source Local destination Trust
packet-filter 3000
```

2、ACL

```
[F1030]display acl 3000
Advanced IPv4 ACL 3000, 2 rules,
ACL's step is 5
rule 0 permit ip source 192.168.1.2 0
rule 5 permit ip counting (173 times matched)
```

查看统计方法：

```
[F1030]display packet-filter statistics zone-pair security source Local destination Trust
Zone-pair: source Local destination Trust
IPv4 ACL 3000
rule 0 permit ip source 192.168.1.2 0
rule 5 permit ip counting (82 packets, 5348 bytes)
Totally 82 packets 5348 bytes permitted, 0 packets denied
Totally 100% permitted, 0% denied
```
