A: 如果要在无线控制器上Telnet到AP的话，要先在控制器上开启AP的Telnet功能，方法如下，其中XX代表AP的名字

[AC1]_h

Now you enter a hidden command view for developer's testing, some commands may affect operation by wrong use, please carefully use it with our engineer's direction.

[AC1-hidecmd]wlan ap-execute XXX telnet enable

[AC1-hidecmd]wlan ap-execute XXX exec-control enable

查看AP的IP地址后就可以Telnet登录了。

display wlan ap name XXX address
