

组网及说明

1 配置需求或说明

1.1 适用产品系列

本案例适用于如S6300-52QF、S6520X-30QC-HI、S6800-54QT、S6820-4C S6900-2F等S6X00系列的交换机

1.2 配置需求

Switch管理VLAN是VLAN2，开启了Telnet功能。Telnet用户主机与Switch相连，需要实现Switch对不同的Telnet用户进行分权管理。其中，admin用户拥有最高管理权限，user1用户只有ping、tracert和display interface 查看接口信息权限。

2 组网图

配置步骤

3 配置步骤

3.1 Switch配置

创建管理VLAN。

```
system-view
```

#设置交换机系统名称为Switch

```
[H3C]sysname Switch
```

```
[Switch] vlan 2
```

```
[Switch-vlan2]quit
```

设置交换机管理地址。

```
[Switch]interface Vlan-interface 2
```

```
[Switch-Vlan-interface2]ip address 1.1.1.1 255.255.255.0
```

```
[Switch-Vlan-interface2]quit
```

设置交换机连接Router的接口加入VLAN2。

```
[H3C]interface g1/0/1
```

```
[H3C-GigabitEthernet1/0/1]port link-type access
```

```
[H3C-GigabitEthernet1/0/1]port access vlan 2
```

```
[H3C-GigabitEthernet1/0/1]quit
```

开启telnet功能。

```
[Switch]telnet server enable
```

配置使用帐号+密码方式进行telnet认证。

```
[Switch]line vty 0 4
```

```
[Switch-line-vty0-4]authentication-mode scheme
```

```
[Switch-line-vty0-4]quit
```

创建admin帐号。

```
[Switch]local-user admin
```

配置帐号的服务类型为telnet。

```
[Switch-luser-manage-admin]service-type telnet
```

配置帐号的密码为admin。

```
[Switch-luser-manage-admin]password simple admin
```

#赋予帐号最高权限。

```
[Switch-luser-manage-admin]authorization-attribute user-role level-15
```

```
[Switch-luser-manage-admin]quit
```

配置user1角色，定义只能使用ping、tracert和display interface相关命令

```
[Switch]role name user1
```

```
[Switch-role-user1]rule 1 permit command ping *
```

```
[Switch-role-user1]rule 2 permit command tracert *
```

```
[Switch-role-user1]rule 3 permit command display interface *
```

```
[Switch-role-user1]quit
```

```

# 创建账号user1。
[Switch]local-user user1
# 配置帐号的服务类型为telnet。
[Switch-luser-manage-user1]service-type telnet
# 配置帐号的密码为user1。
[Switch-luser-manage-user1]password simple user1
#赋予帐号拥有user1角色的权限。
[Switch-luser-manage-user1]authorization-attribute user-role user1
# 为保证用户仅使用授权的用户角色role1，删除用户user1具有的缺省用户角色network-operator。
[Switch-luser-manage-user1]undo authorization-attribute user-role network-operator
[Switch-luser-manage-user1]quit
#保存配置
[Switch]save force

```

3.5 Router配置

```

#设置交换机系统名称为Router
[H3C]sysname Router
#Router配置接口地址，保证能和Switch互通
[Router]interface GigabitEthernet 0/0
[Router-GigabitEthernet0/0]ip address 1.1.1.2 255.255.255.0
[Router-GigabitEthernet0/0]quit
#保存配置
[Router]save force

```

3.2 验证配置

1) Router使用user1帐号 telnet登录Switch测试，display 只能查看接口的信息：

```

<Router>telnet 1.1.1.1
Trying 1.1.1.1 ...
Press CTRL+K to abort
Connected to 1.1.1.1 ...

*****

* no decompiling or reverse-engineering shall be allowed.
*****

login: user1
Password:
<Switch>dis
<Switch>display ?
    interface Specify the interface configuration view
<Switch>display [

```

2) Router使用admin帐号 telnet登录Switch测试，可以查看所有信息：

```

<Router>telnet 1.1.1.1
Trying 1.1.1.1 ...
Press CTRL+K to abort
Connected to 1.1.1.1 ...
