问题描述

3.0 cloudos如何查看CAS插件版本?

解决方法

1、查看计算节点主机名,在前台"云运维---计算节点配置"中查看

- 2、登录后台确认
- 2.1 source /opt/bin/common/tool.sh
- 2.2 使用pod | grep 计算节点主机名 命令查找计算节点的pod
- 2.3 使用kubectl exec -it xxx bash命令进入容器
- 2. 使用openstack-cas-version

```
| root@ZHSD-ZWSP-CLOUDOS ~]# pod | grep caslaashost | caslaashostrc-xijbs | 1/1 | Running 2 | Iroot@Caslaashostrc /]# openstack-cas-cilometer-uninstall openstack-cas-cinder-uninstall openstack-cas-cinder-uninstall openstack-cas-nova-uninstall openstack-cas-nova-uninstall openstack-cas-nova-uninstall openstack-cas-patch-uninstall | Iroot@Caslaashostrc /]# openstack-cas-version openstack-cas-cinder = E0526L10 | Openstack_cas_cinder = E0526L10 | Openstack_cas_nova = E0526L10 | Openstack_cas_nova = E0526L10 | Openstack_cas_patch = E0526L10 | Openstack_cas_pat
```
