

问题描述

hh3cCfgManEventlog (1.3.6.1.4.1.25506.2.4.2.1)	HH3C-CONFIG-MAN-MIB	As per MIB
hh3cPortMstiStateForwarding (1.3.6.1.4.1.25506.8.35.14.0.1)	HH3C-LswMSTP-MIB	As per MIB
hh3cSysClockChangedNotification (1.3.6.1.4.1.25506.2.3.2.1)	HH3C-SYS-MAN-MIB	As per MIB

解决方法

Name: hh3cCfgManEventlog
Type: NOTIFICATION-TYPE
OID: 1.3.6.1.4.1.25506.2.4.2.1
Objects: 1: hh3cCfgLogSrcCmd
2: hh3cCfgLogSrcData
3: hh3cCfgLogDesData

Description: The object calculates the checksum on the current config per 10 minutes and even if it is different from the saved config but if a trap has been sent with the same checksum then don't send again until the checksum is different.

Name: hh3cPortMstiStateForwarding
Type: NOTIFICATION-TYPE
OID: 1.3.6.1.4.1.25506.8.35.14.0.1
Objects: 1: hh3cdot1sInstanceID
2: hh3cdot1sMstiPortIndex

Description: The SNMP trap that is generated when a port turns into forwarding state form other state.

Name: hh3cSysClockChangedNotification
Type: NOTIFICATION-TYPE
OID: 1.3.6.1.4.1.25506.2.3.2.1
Objects: 1: hh3cSysLocalClock

Description: A clock changed notification is generated when the current local date and time for the system has been manually changed. The value of hh3cSysLocalClock reflects new date and time.
