

域模式下创建nas时ix1000的配置

一. 配置域服务器，需要添加如下服务：

- 1. Active Directory
- 2. DNS服务器

二. 通过ssh登陆ix1000系统

三. 在命令行下编辑文件 etc/hosts ，如下图所示：

```
# hosts      This file describes a number of hostname-to-address
#           mappings for the TCP/IP subsystem.  It is mostly
#           used at boot time, when no name servers are running.
#           On small systems, this file can be used instead of a
#           "named" name server.
# Syntax:
#
# IP-Address  Full-Qualified-Hostname  Short-Hostname
#
127.0.0.1    localhost
192.168.0.10 h3c-pdc.neostor.com h3c-pdc
# special IPv6 addresses
::1         localhost ipv6-localhost ipv6-loopback
fe00::0    ipv6-localnet
ff00::0    ipv6-mcastprefix
ff02::1    ipv6-allnodes
```

图中红色部分是添加进去的
192.168.0.10——设置的域服务器的IP
