

SecPath防火墙aspf典型配置

一、组网需求

在防火墙上配置一ASPF策略，检测通过防火墙的FTP流量。实现：内部网络用户发起的FTP连接的返回报文，则允许其通过防火墙进入内部网络，其他报文被禁止。

二、组网图

三、配置步骤

```

[DOWN] dis cur
#
sysname DOWN
#
firewall packet-filter enable
firewall packet-filter default permit
#
undo connection-limit enable
connection-limit default deny
connection-limit default amount upper-limit 50 lower-limit 20
#
firewall statistic system enable
#
radius scheme system
#
domain system
#
local-user admin
password cipher .]@USE=B,53Q=^Q`MAF4<1!!
service-type telnet terminal
level 3
service-type ftp
#
// 创建ASPF策略，策略号为1，该策略检测应用层的FTP协议，并定义没有任何行为的情况下，FTP协议的超时时间为3000秒。
aspf-policy 1
detect ftp aging-time 3000
detect udp
detect tcp
#
//配置访问控制列表3111，以拒绝所有TCP和UDP流量进入内部网络，ASPF会为允许通过的流量创建临时的访问控制列表。

acl number 3000
rule 0 deny tcp
rule 1 deny udp
rule 2 deny ip
#
interface Ethernet1/0
ip address 10.0.0.254 255.255.0.0
//在接口上应用访问控制列表3000
firewall packet-filter 3000 outbound
//在接口上应用ASPF策略
  
```

```
firewall aspf 1 inbound
#
interface Ethernet2/0
speed 10
duplex full
ip address 11.0.0.254 255.255.255.0
#
interface NULL0
#
firewall zone local
set priority 100
#
firewall zone trust
add interface Ethernet2/0
set priority 85
#
firewall zone untrust
add interface Ethernet1/0
set priority 5
#
firewall zone DMZ
set priority 50
#
firewall interzone local trust
#
firewall interzone local untrust
#
firewall interzone local DMZ
#
firewall interzone trust untrust
#
firewall interzone trust DMZ
#
firewall interzone DMZ untrust
#
FTP server enable
#
user-interface con 0
user-interface vty 0 4
authentication-mode scheme
#
return
```

四、配置关键点

1. 配置访问控制列表;
2. 创建aspf策略;
3. 在接口上应用aspf策略。

五、验证结果

在内网10.0.0.1上ping FTP服务器, 发现无法ping通; 在10.0.0.1上ftp 11.0.0.1, 正常。在SecPath10F上查看aspf session, 如下:

```
[DOWN]dis aspf session
```

```
There is 1 ASPF session:
```

```
[Established Sessions]
```

Session	Initiator	Responder	Application	Status
2A836E4	10.0.0.1:1065	11.0.0.1:21	ftp	FTP_CONXN_UP
